Objective

Motivated final-year B.Sc. (Hons.) Computer Science student specializing in Artificial Intelligence and Machine Learning, with practical skills in data analytics, seeking opportunities to apply ML and DL techniques to real-world industry problems.

Education

SRM University AP	2022 – 2026
<i>Bachelor of Science (Hons) in Computer Science with Research</i>	CGPA: 8.70
Narayana Junior College, Guntur	2020 – 2022
<i>Intermediate</i>	PERCENTAGE: 95.2
NRI's Indian Springs School, Guntur	2019 – 2020
<i>10th Grade</i>	PERCENTAGE: 100

Experience

IBM SkillsBuild Virtual Internship	05/2024 – 07/2024
<i>AI – ML Intern</i>	

- Developed and implemented a linear regression model to predict employee burnout, utilizing key features such as resource allocation, mental fatigue score, company type, WFH setup availability, and gender. Preprocessed the data with feature scaling and one-hot encoding to ensure optimal model performance.
- Achieved robust predictive metrics including an R-squared score of 0.92, indicating high explanatory power of the model, and maintained low mean squared and absolute errors — demonstrating strong accuracy and reliability in predicting employee burnout trends within the organization.

Projects

Early Detection of Parkinson’s Disease using Machine Learning	<i>Python, Matplotlib, Scikit-learn</i>
--	---

- Built a Parkinson’s disease prediction model using machine learning, applied SMOTE for data balancing, and evaluated multiple feature selection methods including PCA, RFE, chi-square, dispersion, and Fisher’s score.
- Achieved strong results with PCA-based features and Random Forest, reaching 96% F1 score and 91% accuracy across diverse classifiers (Random Forest, Decision Trees, Naive Bayes, Logistic Regression, SVM, and KNN).

Hate Speech Detection in Multilingual Twitter Data	<i>Python, HuggingFace Transformers, Explainable AI</i>
---	---

- Built a multilingual hate speech detection system for Twitter using ML, DL (CNN, BiLSTM), and Transformer models (mBERT, XLM-RoBERTa, HateBERT) on English–Hindi–Telugu data, achieving up to 78% accuracy on code-mixed social media text.
- Enhanced model transparency using Explainable AI (LIME, SHAP, Integrated Gradients) to interpret predictions at word and embedding levels, improving trust and reliability in automated content moderation systems.

Person Detection During Floods through Drone Technology	<i>Deep learning, Python</i>
--	------------------------------

- Built a deep learning based person detection system using drone footage for flood rescue scenarios, focusing on identifying extremely small and visually degraded human figures under challenging conditions such as water turbulence, reflections, low contrast, and occlusion.
- Delivered strong detection performance across multiple YOLO models, achieving high precision and recall with the best model reaching 0.90 mAP@50, demonstrating reliable generalization to unseen flood scenes and suitability for real-time disaster response applications.

Technical Skills

Programming Languages: Python, C, SQL, HTML, CSS
Frameworks & Tools: Excel, PowerPoint, Power BI, Documentation
Technologies/Concepts: Machine Learning (ML), Deep Learning (DL), Object Oriented Programming(OOP), Database Management(MySQL)
Soft Skills: Communication, Problem Solving, Innovative Thinking, Analytical Skills

Certifications

Oracle Cloud Infrastructure AI Foundations Associate	08/2025
---	---------

- Gained foundational knowledge and hands-on experience in designing, deploying, and managing AI solutions on Oracle Cloud Infrastructure, enhancing skills in cloud-based AI workload management and security.

30-Days Power BI Micro Course	06/2025
--------------------------------------	---------

- Completed a 30-Day Power BI Micro Course, gaining hands-on experience in data transformation, dashboard creation, and generating business insights through interactive visualizations and DAX functions.
